Installing and Using Sendpraat

The instructions below will allow you to access all the functionality of Praat from within ELAN.

Using Sendpraat

Right-click or Control-Click on the .wav in Elan to get the menu w/ the Praat commands.)

When prompted, show Elan where you have installed Praat, and then Sendpraat, on your computer.

Now, when you right-click on your .wav picture in Elan, and choose "View in Praat", Praat will open with that file and you can edit/measure/etc. to your heart's content, and then go back to Praat to find your next token, or whatever you are doing.

Getting and installing Sendpraat

Download sendpraat_intel or sendpraat_ppc (depends on your Mac) from http://www.fon.hum.uva.nl/praat/sendpraat.html

Open your Terminal (It lives inside Applications/Utilities.)

Change sendpraat_intel's (or sendpraat_ppc's) permissions by going to that directory in your Terminal (e.g. type `cd /Applications`).

Then type `chmod 777 sendpraat_intel`.

Type `/Applications/sendpraat_intel`. If you did it right, you should get a bunch of directions about using sendpraat, which you can totally ignore.

Now, you can call up Praat from inside Elan, tell it once where you put sendpraat, and you are good to go.
